Rule : Text that acts as a heading visually or structurally MUST be designated as a true heading in the markup. How To Fix: Fix this issue by using ONE of the following techniques: 1. Use <h1> to <h6> elements to mark text as a heading. Note: Using real HTML headings (<h1>, <h2>, etc.) is preferable when creating new markup. <h1>Types of Web Accessibility Laws</h1> <h2>Civil Rights Laws</h2> <h2>Procurement Laws</h2> <h2>Industry-Specific Laws</h2> 2. When retrofitting legacy markup, using the role="heading" attribute, combined with the aria-level attribute, can be a useful way to add heading semantics to markup without the risk of breaking any styles that might be attached to the legacy markup. The aria-level attribute value is heading level desired. Types of Web Accessibility Laws Reference: Deque University: https://dequeuniversity.com/class/semantic-structure/headings/real-headings	ivan.karmakar@deque.com	23-04-2026 Deque Validation ,Deque Partially Fixed - Apr 28, 2026	,	,

Rule : Parts of graphics (required to understand the content) MUST have a contrast ratio of 3 to 1 against adjacent color(s). Exceptions exist. How To Fix: Fix this issue by adjusting the parts of graphics (that are required to understand the content) and/or adjacent color to increase the contrast to at least 3 to 1. Reference: WCAG Understanding document: https://www.w3.org/WAI/WCAG22/Understanding/non-text-contrast Background: People who have low vision or are colorblind may have difficulty perceiving the important parts of an informative graphical object (i.e., the parts of the graphic required to understand the content) if the contrast between parts of the graphic essential for understanding the graphic is insufficient. When an graphical object has adequate contrast, people who have low vision or are colorblind are more likely to be able to perceive the information conveyed by the object. NOTE: The term "graphical object" applies to stand-alone icons such as a print icon (with no text), and the important parts of a more complex diagram such as each line in a graph. When zooming causes content to overlap other content, users with low vision may not be able to see or use that content. When content is created so that it reflows without losing information or functionality at screen widths down to 320px, users can view a web page in a 1280px width browser screen and zoom the content to	karthik.mohan@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	,	,

Rule :
Group labels MUST be programmatically-associated with the group if the individual labels for each element in the group are insufficient on their own.

karthik.mohan@deque.com

Forms

How To Fix:
Fix this issue by using ONE of the following techniques:
1. Use the fieldset/legend technique:
a. Enclose the group label in a <legend> element.
b. Enclose the <legend> element and all of the related form fields in a <fieldset> element.

```
<fieldset>
<legend>Preferred contact method</legend>
<label for="email">Email</label>
<input type="radio" id="email" name="contact">
<label for="phone">Phone</label>
<input type="radio" id="phone" name="contact">
</fieldset>
```

2. Use the ARIA group/labelledby technique:
a. Enclose the group label in a container such as a or a <p> and give it a unique id attribute value.
b. Enclose the related form controls in a container such as a .
c. Apply the role="group" and aria-labelledby attributes to the container.
d. Make the value of the aria-labelledby attribute match the value of the id attribute on the group label container

Rule : The reading and navigation order MUST be logical and intuitive. All focusable elements MUST have a visual focus indicator when in focus. How To Fix: Fix this issue by using ONE of the following techniques: 1.If the element should not be visible or focusable, remove the element from the DOM or hide it from all users with CSS such as display:none. 2.If the element is meant to be visible but not interactive, make it visible and remove the focus state. 3.If the element is meant to be visible and interactive, then ensure that it is both focusable and visible to all users. Rule : The name, role, value, states, and properties of user interface components MUST be programmatically determinable by assistive technologies. How To Fix: Fix this issue by using the aria-current attribute to indicate which element is the current item within a container or set of related elements, such as the current page, step, location, date, or time. Reference: WAI-ARIA Recommendation: https://www.w3.org/TR/wai-aria-1.1/#aria-current Background: States and properties are attributes used to convey essential information about an element to screen readers and other assistive technologies. Some roles require certain state and property information - such as the checked/unchecked state of a checkbox. Native HTML elements provide those required states and properties, so nothing more needs to be done. If you create a custom version of a native HTML element or a custom control or widget that does not have a native HTML equivalent, you must add the relevant states and properties using ARIA.	ivan.karmakar@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	, ,

Rule :
Labels MUST be visible

How To Fix:
Fix this issue by ensuring that the select or dropdown control has a persistent visible label. It is permissible for the first option in the list of options to serve as the visible label for the control as long as it is not a selectable option itself. For example, State as the first option of a single selection select control passes, but Alabama does not.

Rule : Semantic HTML elements MUST be used according to their semantic meaning, not to create a visual effect. How To Fix: Fix this issue by removing the list markup or adding role="none" to the or element. Reference: Deque University: https://dequeuniversity.com/class/semantic-structure/lists/semantic-markup W3C-WAI tutorial: https://www.w3.org/WAI/tutorials/page-structure/content/#lists Background: People who can see are able to look at a list and get a sense that it is a list, how large it is, and its structure - whether there are multiple lists, nested lists, etc. People who are blind do not have this ability if the list is not marked with semantic list markup. Lists must be marked semantically in a way that correctly identifies the list structure and type: unordered, ordered, or definition/description. When list markup is correctly applied, screen readers are able to notify users when they come to a list and tell them how many items are in a list.	alfisha.razaa@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	,	,

Rule : Small text (under 18 point regular font or 14 point bold font) MUST have a contrast ratio of at least 4.5 to 1 with the background. How To Fix: Fix this issue by adjusting the text and/or background to increase the contrast to at least 4.5 to 1. Reference: Deque University: https://dequeuniversity.com/class/visual-design/contrast/text-against-background Background: People who have low vision or are colorblind may have difficulty reading text if the contrast between the text its background is insufficient. When the contrast ratio between text and its background is adequate, people who have low vision or are colorblind are more likely to be able to read the text.	ivan.karmakar@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	,	,

Rule : Lists MUST be constructed using the appropriate semantic markup. How To Fix: Fix this issue by using ONE of the following techniques: 1. Unordered list: Wrap a series of list items ( ) inside an unordered list element ( ). Unordered lists should be used when a set of items can be placed in any order. - Strawberries - Papaya - Mangos 2. Ordered list: Wrap a series of list items ( ) inside an ordered list element ( ). Ordered lists should be used when the list items need to be placed in a specific order. How to boil an egg - Place eggs in a large saucepan. - Cover them with cool water by 1 inch. - Cover pan with a lid and bring water to a rolling boil over high heat. - When the water has reached a boil, remove saucepan from the burner. - Let eggs sit in water for 12 minutes.	alfisha.raza@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	,	,

Rule : The purpose of each link MUST be able to be determined from the link text alone, or from the link text and its programmatic context. How To Fix: Fix this issue by using ONE of the following techniques: 1. Provide unique link text that conveys the purpose of each link on its own. 2. Ensure that the link text PLUS its programmatic context conveys the purpose of the link. Programmatic context can be one of the following: same sentence, paragraph, list item, or table cell as the link; in the table header cell for a link in a data table; via aria-label, aria-labelledby, or aria-describedby attributes. NOTE: aria-label and aria-labelledby will completely override any other link text inside the link, while aria-describedby will supplement (not override) the link text inside the link. Context taken from surrounding text will be most usable if it precedes the link. Read More	ivan.karmakar@deque.com	23-04-2026 Deque Validation ,Deque Not Applicable - Apr 28, 2026	,	,

Rule : The name, role, value, states, and properties of user interface components MUST be programmatically determinable by assistive technologies. How To Fix: Tabs are a set of layered sections of content, known as tab panels, that display one panel of content at a time. Each tab panel has an associated tab element, that when activated, displays the panel. The list of tab elements is arranged along one edge of the currently displayed panel, most commonly the top edge. Fix this issue by using the following roles and attributes: 1. The element that serves as the container for the set of tabs has role tablist. 2. Each element that serves as a tab has role tab and is contained within the element with role tablist. 3. Each element that contains the content panel for a tab has role tabpanel. 4. Each element with role tab has the property aria-controls referring to its associated tabpanel element. 5. The active tab element has the state aria-selected set to true and all other tab elements have it set to false. 6. Each element with role tabpanel has the property aria-labelledby referring to its associated tab element. 7. If the tablist element is vertically oriented, it has the property aria-orientation set to vertical. The default value of aria-orientation for a tablist element is horizontal.	karthik.mohan@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	, ,

Rule : The name, role, value, states, and properties of user interface components MUST be programmatically determinable by assistive technologies. Rule : The purpose of each link MUST be able to be determined from the link text alone, or from the link text and its programmatic context. How To Fix: Fix this issue by using ONE of the following techniques: 1. Provide unique link text that conveys the purpose of each link on its own. 2. Ensure that the link text PLUS its programmatic context conveys the purpose of the link. Programmatic context can be one of the following: same sentence, paragraph, list item, or table cell as the link; in the table header cell for a link in a data table; via aria-label, aria-labelledby, or aria-describedby attributes. NOTE: aria-label and aria-labelledby will completely override any other link text inside the link, while aria-describedby will supplement (not override) the link text inside the link. Context taken from surrounding text will be most usable if it precedes the link. Read More	karthik.mohan@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	, ,

Rule : Semantic HTML elements MUST be used according to their semantic meaning, not to create a visual effect. How To Fix: Fix this issue by removing the list markup or adding role="none" to the or element. Reference: Deque University: https://dequeuniversity.com/class/semantic-structure/lists/semantic-markup W3C-WAI tutorial: https://www.w3.org/WAI/tutorials/page-structure/content/#lists Background: People who can see are able to look at a list and get a sense that it is a list, how large it is, and its structure - whether there are multiple lists, nested lists, etc. People who are blind do not have this ability if the list is not marked with semantic list markup. Lists must be marked semantically in a way that correctly identifies the list structure and type: unordered, ordered, or definition/description. When list markup is correctly applied, screen readers are able to notify users when they come to a list and tell them how many items are in a list.	karthik.mohan@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	,	,

Rule : The name, role, value, states, and properties of user interface components MUST be programmatically determinable by assistive technologies. How To Fix: Fix this issue by using the aria-current attribute to indicate which element is the current item within a container or set of related elements, such as the current page, step, location, date, or time. Reference: WAI-ARIA Recommendation: https://www.w3.org/TR/wai-aria-1.1/#aria-current Background: States and properties are attributes used to convey essential information about an element to screen readers and other assistive technologies. Some roles require certain state and property information - such as the checked/unchecked state of a checkbox. Native HTML elements provide those required states and properties, so nothing more needs to be done. If you create a custom version of a native HTML element or a custom control or widget that does not have a native HTML equivalent, you must add the relevant states and properties using ARIA.	alfisha.razaa@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	, ,

Rule : The reading and navigation order MUST be logical and intuitive. How To Fix: Fix this issue by removing the element from the DOM or hiding it from all users with CSS such as display:none. Reference: Deque University: https://dequeuniversity.com/class/semantic-structure/within-pages/order Background: When content that is meant to be hidden from all users - such as error messages or hidden submenus or dialogs or alerts - is still available to screen reader users, they may be misled or confused about the meaning of the content. This may occur when techniques are used that hide content visibly but not from screen reader users.	alfisha.razaa@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	, ,

Rule : Small text (under 18 point regular font or 14 point bold font) MUST have a contrast ratio of at least 4.5 to 1 with the background. How To Fix: Fix this issue by adjusting the color of the hovered or focused control's text and/or background to increase the contrast to at least 4.5 to 1. Reference: Deque University: https://dequeuniversity.com/class/visual-design/contrast/text-against-background Background: People who have low vision or are colorblind may have difficulty reading text if the contrast between the text its background is insufficient. When the contrast ratio between text and its background is adequate, people who have low vision or are colorblind are more likely to be able to read the text.	karthik.mohan@deque.com	Forms

Rule :
The spacing between letters, words, lines of text and paragraphs MUST be adjustable.

karthik.mohan@deque.com

Forms

How To Fix:
Fix this issue by allowing users to override text spacing styles by providing flexibility in the height and width of content containers. Some common techniques include:
1. Size containers to a have a value greater than the default width of the text. Small areas of text (such as navigation bars) need to have sufficient space within each box so that words and characters do not expand out of their containers.
2. Use the inline-block value of the CSS display property and do not set negative margins to help allow for spacing overrides.
3. Do not set the CSS height property, it can help ensure paragraphs are able to expand.

Rule : The name, role, value, states, and properties of user interface components MUST be programmatically determinable by assistive technologies. How To Fix: Tabs are a set of layered sections of content, known as tab panels, that display one panel of content at a time. Each tab panel has an associated tab element, that when activated, displays the panel. The list of tab elements is arranged along one edge of the currently displayed panel, most commonly the top edge. Fix this issue by using the following roles and attributes: 1. The element that serves as the container for the set of tabs has role tablist. 2. Each element that serves as a tab has role tab and is contained within the element with role tablist. 3. Each element that contains the content panel for a tab has role tabpanel. 4. Each element with role tab has the property aria-controls referring to its associated tabpanel element. 5. The active tab element has the state aria-selected set to true and all other tab elements have it set to false. 6. Each element with role tabpanel has the property aria-labelledby referring to its associated tab element. 7. If the tablist element is vertically oriented, it has the property aria-orientation set to vertical. The default value of aria-orientation for a tablist element is horizontal.	karthik.mohan@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	, ,

Rule : The name, role, value, states, and properties of user interface components MUST be programmatically determinable by assistive technologies. How To Fix: A combobox is an input widget that most closely resembles an HTML select element. It generally has an input with a popup that enables users to select a value for the combobox from a collection of possible options. Some allow the user to type into the input. The default state of a combobox is collapsed. Fix this issue by using ONE of the following techniques: 1. Use an HTML <select> element with <option> elements to create the drop-down menu. 2. Use the ARIA design pattern for a combobox. View the full ARIA design pattern for a combo including expected keyboard interactions and examples: https://www.w3.org/WAI/ARIA/apg/patterns/combobox/ Reference: W3C HTML5 Recommendation: https://www.w3.org/TR/html5/sec-forms.html#the-select-element WAI-ARIA Authoring Practices: https://www.w3.org/WAI/ARIA/apg/patterns/combobox/ Background:	alfisha.razaa@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026,Third-Party Google Search	,,	,,

Rule : Text that acts as a heading visually or structurally MUST be designated as a true heading in the markup. How To Fix: Fix this issue by using ONE of the following techniques: 1. Use <h1> to <h6> elements to mark text as a heading. Note: Using real HTML headings (<h1>, <h2>, etc.) is preferable when creating new markup. <h1>Types of Web Accessibility Laws</h1> <h2>Civil Rights Laws</h2> <h2>Procurement Laws</h2> <h2>Industry-Specific Laws</h2> 2. When retrofitting legacy markup, using the role="heading" attribute, combined with the aria-level attribute, can be a useful way to add heading semantics to markup without the risk of breaking any styles that might be attached to the legacy markup. The aria-level attribute value is heading level desired. Rule : Small text (under 18 point regular font or 14 point bold font) MUST have a contrast ratio of at least 4.5 to 1 with the background. How To Fix: Fix this issue by adjusting the text and/or background to increase the contrast to at least 4.5 to 1. Reference: Deque University: https://dequeuniversity.com/class/visual-design/contrast/text-against-background Background: People who have low vision or are colorblind may have difficulty reading text if the contrast between the text its background is insufficient. When the contrast ratio between text and its background is adequate, people who have low vision or are colorblind are more likely to be able to read the text.	ivan.karmakar@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	,	,

Rule : All focusable elements MUST have a visual focus indicator when in focus. Focusable elements SHOULD have enhanced visual focus indicator styles. How To Fix: Common keyboard focus indicator solutions include: 1. A 2px box around the focused element 2. A change in the background color of the focused element 3. The addition of an icon, such as an arrow, next to a menu item 4. The addition of a thick line under or next to the focused element 5. A distinctive change to the text of the component such as making it bold and/or underlined 6. Use the default browser focus indicator. NOTE: Since each browser has its own default focus indicator style, check each of the major browsers (Chrome, Firefox, Edge, IE, Safari) to ensure the default focus indicator is visible as you tab through the page. A keyboard focus indicator can take different forms; it does not have to be a boring box. But the goal is to provide a difference in contrast between a component's default and focused states of at least 3 to 1 or another distinctive visual change.	alfisha.raza@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	,	,

Rule :
Error feedback MUST be meaningful.

How To Fix:
Fix this issue by providing the required data format in the error message, for example: "Enter expiration date in format MM/YYYY"

Reference:
Deque University:
https://dequeuniversity.com/class/forms/form-validation/error-identification

Background:
Even when people are aware that an error in a form has occurred, they may not know how to correct it. Whenever it is possible, error messages should provide appropriate suggestions for correction of an input error such as: an example format for a date or account number; information on characters that may not be used in a field; or notification that data is not within the expected range. This will allow people to recover from mistakes more easily while filling out a form.

HTML Video Element

Rule : Semantic HTML elements MUST be used according to their semantic meaning, not to create a visual effect. How To Fix: Fix this issue by removing the list markup or adding role="none" to the or element. Reference: Deque University: https://dequeuniversity.com/class/semantic-structure/lists/semantic-markup W3C-WAI tutorial: https://www.w3.org/WAI/tutorials/page-structure/content/#lists Background: People who can see are able to look at a list and get a sense that it is a list, how large it is, and its structure - whether there are multiple lists, nested lists, etc. People who are blind do not have this ability if the list is not marked with semantic list markup. Lists must be marked semantically in a way that correctly identifies the list structure and type: unordered, ordered, or definition/description. When list markup is correctly applied, screen readers are able to notify users when they come to a list and tell them how many items are in a list.	ivan.karmakar@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	,	,

Rule : All focusable elements MUST have a visual focus indicator when in focus. Focusable elements SHOULD have enhanced visual focus indicator styles. How To Fix: Common keyboard focus indicator solutions include: 1. A 2px box around the focused element 2. A change in the background color of the focused element 3. The addition of an icon, such as an arrow, next to a menu item 4. The addition of a thick line under or next to the focused element 5. A distinctive change to the text of the component such as making it bold and/or underlined 6. Use the default browser focus indicator. NOTE: Since each browser has its own default focus indicator style, check each of the major browsers (Chrome, Firefox, Edge, IE, Safari) to ensure the default focus indicator is visible as you tab through the page. A keyboard focus indicator can take different forms; it does not have to be a boring box. But the goal is to provide a difference in contrast between a component's default and focused states of at least 3 to 1 or another distinctive visual change.	karthik.mohan@deque.com	Third-Party Recaptcha,Cannot Fix	,	,

Rule : Functionality MUST be available using the keyboard, unless the functionality cannot be accomplished in any known way using a keyboard. How To Fix: Fix this issue by ensuring the component can be used by the keyboard. This includes ensuring controls are: 1. Focusable with a keyboard (i.e. can be reached using the Tab key or Arrow keys on a keyboard), and 2. Operable with a keyboard (e.g. links are activated with the Enter key, buttons are activated with Enter and Spacebar, checkboxes are activated with Spacebar, dragging and swiping actions have a keyboard alternative, etc.) The best way to do this is to use native HTML elements when HTML equivalents exist (e.g. anchor, button, select, text area, and input elements). When custom (non native HTML) controls have to be used, you must ensure they can be focused with a keyboard (often using tabindex="0") and operated with a keyboard (using JavaScript event handlers). The ARIA Authoring Practices Guide provides information on expected keyboard interaction patterns for custom controls and widgets and working examples (see References below). Rule : Small text (under 18 point regular font or 14 point bold font) MUST have a contrast ratio of at least 4.5 to 1 with the background.	karthik.mohan@deque.com	Forms

How To Fix:
Fix this issue by adjusting the text and/or background to increase the contrast to at least 4.5 to 1.

Reference:
Deque University:
https://dequeuniversity.com/class/visual-design/contrast/text-against-background

Background:
People who have low vision or are colorblind may have difficulty reading text if the contrast between the text its background is insufficient. When the contrast ratio between text and its background is adequate, people who have low vision or are colorblind are more likely to be able to read the text.

Rule : The purpose of each link MUST be able to be determined from the link text alone, or from the link text and its programmatic context. How To Fix: Fix this issue by using ONE of the following techniques: 1. Provide unique link text that conveys the purpose of each link on its own. 2. Ensure that the link text PLUS its programmatic context conveys the purpose of the link. Programmatic context can be one of the following: same sentence, paragraph, list item, or table cell as the link; in the table header cell for a link in a data table; via aria-label, aria-labelledby, or aria-describedby attributes. NOTE: aria-label and aria-labelledby will completely override any other link text inside the link, while aria-describedby will supplement (not override) the link text inside the link. Context taken from surrounding text will be most usable if it precedes the link. Read More	ivan.karmakar@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	, ,

Rule :
The name, role, value, states, and properties of user interface components MUST be programmatically determinable by assistive technologies.

How To Fix:
Fix this issue by using the aria-current attribute to indicate which element is the current item within a container or set of related elements, such as the current page, step, location, date, or time.

Reference:
WAI-ARIA Recommendation: https://www.w3.org/TR/wai-aria-1.1/#aria-current

Background:
States and properties are attributes used to convey essential information about an element to screen readers and other assistive technologies. Some roles require certain state and property information - such as the checked/unchecked state of a checkbox. Native HTML elements provide those required states and properties, so nothing more needs to be done. If you create a custom version of a native HTML element or a custom control or widget that does not have a native HTML equivalent, you must add the relevant states and properties using ARIA.

karthik.mohan@deque.com

Forms

Rule :
The spacing between letters, words, lines of text and paragraphs MUST be adjustable.

How To Fix:
Fix this issue by allowing users to override text spacing styles by providing flexibility in the height and width of content containers. Some common techniques include:
1. Size containers to a have a value greater than the default width of the text. Small areas of text (such as navigation bars) need to have sufficient space within each box so that words and characters do not expand out of their containers.
2. Use the inline-block value of the CSS display property and do not set negative margins to help allow for spacing overrides.
3. Do not set the CSS height property, it can help ensure paragraphs are able to expand.

Reference:
WCAG Understanding document:
https://www.w3.org/WAI/WCAG22/Understanding/text-spacing

Background:
Some people with vision, reading, and cognitive disabilities have trouble reading particular fonts or font weights, or need more space between letters, words, or paragraphs to effectively read text content. Text content and containers

Rule : The reading and navigation order MUST be logical and intuitive.	karthik.mohan@deque.com	Forms

How To Fix:
Fix this issue by using ONE of the following techniques:
1. Ensure that added or updated content is, in the DOM, below the element or event that triggered the change.

2. Thoughtfully manage programmatic focus within the workflow so screen reader users are made aware of new or updated content without disrupting the user's overall workflow / reading order.

Reference:
Deque University:
https://dequeuniversity.com/class/semantic-structure/within-pages/order

Background:
People who are blind cannot see when content is dynamically added or updated in a page. If content is changed above or in a location remote from a screen reader user's point of reference, they may never be aware of the change. Changes of content must be added, in the DOM, below the element or event that triggered the addition, or focus must be thoughtfully managed within the workflow. A screen reader user will then encounter the changed information in the natural reading order or work

Rule : Text that acts as a heading visually or structurally MUST be designated as a true heading in the markup. How To Fix: Fix this issue by using ONE of the following techniques: 1. Use <h1> to <h6> elements to mark text as a heading. Note: Using real HTML headings (<h1>, <h2>, etc.) is preferable when creating new markup. <h1>Types of Web Accessibility Laws</h1> <h2>Civil Rights Laws</h2> <h2>Procurement Laws</h2> <h2>Industry-Specific Laws</h2> 2. When retrofitting legacy markup, using the role="heading" attribute, combined with the aria-level attribute, can be a useful way to add heading semantics to markup without the risk of breaking any styles that might be attached to the legacy markup. The aria-level attribute value is heading level desired. Rule : The name, role, value, states, and properties of user interface components MUST be programmatically determinable by assistive technologies. How To Fix: To fix this issue, BOTH a ROLE and a NAME must be provided for the button. Provide a ROLE by using one of the following techniques: 1. Use a native HTML <button> element. <button>Apply now!</button> 2. Add role="button" to the custom button container. NOTE: If you use role="button" instead of <button>, you will need to ensure Enter and Spacebar can activate the button. Provide a NAME by using any of the following techniques: 1. Use the innertext of the <button> or role="button" element <button>Apply now!</button>	alfisha.raza@deque.com	23-04-2026 Deque Validation ,Deque Not Applicable - May 05, 2026,Removed from Site,Third-Party Chat Widget	,,, ,,,

Rule : Orientation of the content MUST NOT be locked to either landscape or portrait, unless a specific orientation is essential for the functionality How To Fix: Fix this issue by ensuring content is not cut off, overlapped by other content, or otherwise unable to be accessed by scrolling or swiping, when viewed in both landscape and portrait orientation by use of ANY of the following techniques: 1. Use CSS techniques such as media queries, grids, or flexbox to allow content to adjust to the current device orientation and viewport size. 2. Use show/hide controls (e.g. toggles) to allow access to content in different orientations. Reference: Deque University:https://dequeuniversity.com/class/responsive-zoom/orientation WCAG Understanding document: https://www.w3.org/WAI/WCAG21/Understanding/orientation Background: When a webpage or application is locked to a default screen orientation, people who have a preferred device orientation (e.g. portrait or landscape), such as people	karthik.mohan@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	, ,

Rule : Small text (under 18 point regular font or 14 point bold font) MUST have a contrast ratio of at least 4.5 to 1 with the background.	karthik.mohan@deque.com	Forms

How To Fix:
Fix this issue by adjusting the text and/or background to increase the contrast to at least 4.5 to 1.

Reference:
Deque University:
https://dequeuniversity.com/class/visual-design/contrast/text-against-background

Background:
People who have low vision or are colorblind may have difficulty reading text if the contrast between the text its background is insufficient. When the contrast ratio between text and its background is adequate, people who have low vision or are colorblind are more likely to be able to read the text.

Rule : The purpose of each link MUST be able to be determined from the link text alone, or from the link text and its programmatic context. How To Fix: Fix this issue by using ONE of the following techniques: 1. Provide unique link text that conveys the purpose of each link on its own. 2. Ensure that the link text PLUS its programmatic context conveys the purpose of the link. Programmatic context can be one of the following: same sentence, paragraph, list item, or table cell as the link; in the table header cell for a link in a data table; via aria-label, aria-labelledby, or aria-describedby attributes. NOTE: aria-label and aria-labelledby will completely override any other link text inside the link, while aria-describedby will supplement (not override) the link text inside the link. Context taken from surrounding text will be most usable if it precedes the link. Read More	alfisha.raza@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	, ,

Rule : The name, role, value, states, and properties of user interface components MUST be programmatically determinable by assistive technologies. How To Fix: Fix this issue by using the aria-pressed attribute on the toggle button to convey its pressed or unpressed state. <button aria-pressed="true">Mute</button> <button aria-pressed="false">Mute</button> Reference: W3C ARIA Recommendation: https://www.w3.org/TR/wai-aria-1.1/#aria-pressed Background: When a button has a visual "pressed" state, that information must also be conveyed programmatically for screen reader and other assistive technology users.	alfisha.raza@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	, ,

Rule : Functionality MUST be available using the keyboard, unless the functionality cannot be accomplished in any known way using a keyboard. How To Fix: Fix this issue by ensuring the component can be used by the keyboard. This includes ensuring controls are: 1. Focusable with a keyboard (i.e. can be reached using the Tab key or Arrow keys on a keyboard), and 2. Operable with a keyboard (e.g. links are activated with the Enter key, buttons are activated with Enter and Spacebar, checkboxes are activated with Spacebar, dragging and swiping actions have a keyboard alternative, etc.) The best way to do this is to use native HTML elements when HTML equivalents exist (e.g. anchor, button, select, text area, and input elements). When custom (non native HTML) controls have to be used, you must ensure they can be focused with a keyboard (often using tabindex="0") and operated with a keyboard (using JavaScript event handlers). The ARIA Authoring Practices Guide provides information on expected keyboard interaction patterns for custom controls and widgets and working examples (see References below). Rule : The name, role, value, states, and properties of user interface components MUST be programmatically determinable by assistive technologies. How To Fix: A dialog is a window overlaid on either the primary window or another dialog window. Windows under a modal dialog are inert. That is, users cannot interact with content outside an active dialog window. Fix this issue by using the following roles and attributes: 1. The element that serves as the dialog container has a role of dialog. 2. All elements required to operate the dialog are descendants of the element that has role dialog. 3. The dialog container element has aria-modal set to true. 4. The dialog has either: a. A value set for the aria-labelledby property that refers to a visible dialog title. b. A label specified by aria-label. 5. Optionally (if focus is set to an element other than the heading text inside the dialog) the aria-describedby property is set on the element with the dialog role to indicate which element or elements in the dialog contain content that describes the primary purpose or message of the dialog. Specifying descriptive elements enables screen readers to announce the description along with the dialog title and initially focused element when the dialog opens.	alfisha.raza@deque.com	23-04-2026 Deque Validation ,Deque Not Applicable - May 05, 2026,Removed from Site,Third-Party Chat Widget	,,, ,,,

Rule : The name, role, value, states, and properties of user interface components MUST be programmatically determinable by assistive technologies. How To Fix: Fix this issue by using the aria-current attribute to indicate which element is the current item within a container or set of related elements, such as the current page, step, location, date, or time. Reference: WAI-ARIA Recommendation: https://www.w3.org/TR/wai-aria-1.1/#aria-current Background: States and properties are attributes used to convey essential information about an element to screen readers and other assistive technologies. Some roles require certain state and property information - such as the checked/unchecked state of a checkbox. Native HTML elements provide those required states and properties, so nothing more needs to be done. If you create a custom version of a native HTML element or a custom control or widget that does not have a native HTML equivalent, you must add the relevant states and properties using ARIA.	karthik.mohan@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	, ,

NOTE: Since each browser has its own default focus indicator style, check each of the major browsers (Chrome, Firefox, Edge, IE, Safari) to ensure the default focus indicator is visible as you tab through the page. A keyboard focus indicator can take different forms; it does not have to be a boring box. But the goal is to provide a difference in contrast between a component's default and focused states of at least 3 to 1 or another distinctive visual change.	alfisha.razaa@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	,	,

Rule : Small text (under 18 point regular font or 14 point bold font) MUST have a contrast ratio of at least 4.5 to 1 with the background.	karthik.mohan@deque.com	Forms

How To Fix:
Fix this issue by adjusting the text and/or background to increase the contrast to at least 4.5 to 1.

Reference:
Deque University:
https://dequeuniversity.com/class/visual-design/contrast/text-against-background

Background:
People who have low vision or are colorblind may have difficulty reading text if the contrast between the text its background is insufficient. When the contrast ratio between text and its background is adequate, people who have low vision or are colorblind are more likely to be able to read the text.

Rule : Header/data associations that cannot be designated with <th> and scope MUST be designated with headers plus ids. How To Fix: Fix this issue by doing ALL of the following: 1. Mark all header cells as <th> elements. 2. Mark every <th> element (header cell) with a unique id attribute value. 3. Mark every <td> element (data cell) with a headers attribute. The value of a data cell's headers attribute must be a space-separated list of all of its corresponding header cell id values. Reference: Deque University: https://dequeuniversity.com/class/semantic-structure/tables/complex W3C-WAI tutorial: https://www.w3.org/WAI/tutorials/tables/ Background: People who are blind cannot see the organizational structure of a table with data arranged in rows and columns with corresponding header cells. In order for screen reader users to understand the logical relationships of data arranged in a table, tables need HTML markup that indicates header cells and data cells and defines their relationship. When tables are marked correctly, screen	karthik.mohan@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	,	,

Rule : Lists MUST be constructed using the appropriate semantic markup. How To Fix: Fix this issue by correctly applying / - or / - markup. 1. Unordered list: Wrap a series of list items ( ) inside an unordered list element ( ). Unordered lists should be used when a set of items can be placed in any order. - Strawberries - Papaya - Mangos - Kiwis ... 2. Ordered list: Wrap a series of list items ( ) inside an ordered list element ( ). Ordered lists should be used when the list items need to be placed in a specific order. How to boil an egg - Place eggs in a large saucepan. - Cover them with cool water by 1 inch. - Cover pan with a lid and bring water to a rolling boil over high heat.	alfisha.raza@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	,	,

Rule : All focusable elements MUST have a visual focus indicator when in focus. Focusable elements SHOULD have enhanced visual focus indicator styles. How To Fix: Common keyboard focus indicator solutions include: 1. A 2px box around the focused element 2. A change in the background color of the focused element 3. The addition of an icon, such as an arrow, next to a menu item 4. The addition of a thick line under or next to the focused element 5. A distinctive change to the text of the component such as making it bold and/or underlined 6. Use the default browser focus indicator. NOTE: Since each browser has its own default focus indicator style, check each of the major browsers (Chrome, Firefox, Edge, IE, Safari) to ensure the default focus indicator is visible as you tab through the page. A keyboard focus indicator can take different forms; it does not have to be a boring box. But the goal is to provide a difference in contrast between a component's default and focused states of at least 3 to 1 or another distinctive visual change.	alfisha.raza@deque.com	23-04-2026 Deque Validation ,Deque Not Applicable - May 05, 2026,Removed from Site,Third-Party Chat Widget	,,,	,,,
Fix all of the following: Invalid ARIA attribute value: aria-controls="collapseOne"	ivan.karmakar@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	,	,

Rule : For each user interface component that includes a visible text label, the accessible name MUST match (or include) the visible text in the label. How To Fix: Fix this issue by ensuring that the accessible name - such as the aria-label - contains the text of the visible label in the same order in which it appears. While it is not necessary that the visible label and accessible name match exactly, it is a best practice to have the accessible name begin with the visible text. Reference: Deque University: https://dequeuniversity.com/class/forms/labels/visibility WCAG Understanding document: https://www.w3.org/WAI/WCAG22/Understanding/label-in-name Background: Speech input users can interact with a webpage by speaking the visible text labels of menus, links, and buttons that appear on the screen. It is confusing to speech input users when they say a visible text label they see, but the speech command does not work because the component's accessible (programmatic) name does not match the visible label. When a user interface component has a visible text label - whether it be real text or an image	alfisha.raza@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	, ,

Rule : The alternative text for informative images MUST be accurately conveying the purpose of the image, and the author's intent in a way that is useful to those who cannot see the image. How To Fix: Fix this issue by ensuring that the alternative text for the informative image describes its intent, purpose, or meaning. <img src="sunset.jpg" alt="The sun setting over the Pacific Ocean, with a silhouette of a flying seagull in the foreground"> Reference: Deque University: https://dequeuniversity.com/class/images/alt-text/informative W3C-WAI tutorial: https://www.w3.org/WAI/tutorials/images/ Background: People who are blind cannot see images on a page. In order to give people who cannot see an image access to the information conveyed by the image, it must have a text alternative. The text alternative must describe the information or function represented by the image. Screen readers can then use the alternative text to convey that	alfisha.raza@deque.com	23-04-2026 Deque Validation ,Deque Fixed - Apr 28, 2026	, ,

Rule : Parts of graphics (required to understand the content) MUST have a contrast ratio of 3 to 1 against adjacent color(s). Exceptions exist. How To Fix: Fix this issue by adjusting the parts of graphics (that are required to understand the content) and/or adjacent color to increase the contrast to at least 3 to 1. Reference: WCAG Understanding document: https://www.w3.org/WAI/WCAG22/Understanding/non-text-contrast Background: People who have low vision or are colorblind may have difficulty perceiving the important parts of an informative graphical object (i.e., the parts of the graphic required to understand the content) if the contrast between parts of the graphic essential for understanding the graphic is insufficient. When an graphical object has adequate contrast, people who have low vision or are colorblind are more likely to be able to perceive the information conveyed by the object. NOTE: The term "graphical object" applies to stand-alone icons such as a print icon (with no text), and the important parts of a more complex diagram such as each line in a graph. For simple graphics such as single-color icons the	alfisha.raza@deque.com	23-04-2026 Deque Validation ,Deque Not Applicable - May 05, 2026,Removed from Site,Third-Party Chat Widget	,,,	,,,

Rule :
Text that acts as a heading visually or structurally MUST be designated as a true heading in the markup.

karthik.mohan@deque.com

Forms

How To Fix:
Fix this issue by using ONE of the following techniques:
1. Use <h1> to <h6> elements to mark text as a heading.
Note: Using real HTML headings (<h1>, <h2>, etc.) is preferable when creating new markup.

<h1>Types of Web Accessibility Laws</h1>
<h2>Civil Rights Laws</h2>
<h2>Procurement Laws</h2>
<h2>Industry-Specific Laws</h2>

2. When retrofitting legacy markup, using the role="heading" attribute, combined with the aria-level attribute, can be a useful way to add heading semantics to markup without the risk of breaking any styles that might be attached to the legacy markup. The aria-level attribute value is heading level desired.

Types of Web Accessibility Laws

ksimonso@craftonhills.edu: I don't understand why alt text would need to be applied to icons in the filter buttons when the text is immediately following says the same thing. It would read out "Button Image Degrees Degrees" instead of "Button Degrees". I have added alt text to the filtered results, though.
shipra.pandey@deque.com ,ksimonso@craftonhills.edu: shipra.pandey@deque.com I still need an answer on this.
Thanks.,ashritha.budharaju@deque.com: shipra.pandey@deque.com - Please find our response below:

During the audit time, the alt was missing for the icons beside each search results. To resolve this, we requested that these icons match the alt text used for the corresponding filter buttons.
Now that the alt is provided for the icons beside the filtered results which solves the issue and for the icons in the filter buttons, the alt is not needed as the text beside it conveys the info.

But there is one more issue for the alt provided. That is:
- For the arrow icon image in the filtered results, the current provided alt is just "Transfer" which is not same as conveyed visually by button name

ksimonso@craftonhills.edu: This isn't really a header for the other items, it's just styled as the thing we want users to notice. Is there a way to do that for Accessibility? shipra.pandey@deque.com ,shipra.pandey@deque.com: ashritha.budharaju@deque.com Need your help regarding the comment,ashritha.budharaju@deque.com: shipra.pandey@deque.com - Here is our response

The visual presentation—specifically the bold styling and increased font size—establishes a clear hierarchical relationship, suggesting this element serves as a heading for the two subsequent links. This interpretation is reinforced by the fact that the linked content is related to the runners. To ensure accessibility, this relationship should be programmatically defined using a proper heading tag.

But as per your comments, if this is not functioning as a heading, this issue can be ignored.,kedhara.nakka@deque.com: Validation round: 1

shipra.pandey@deque.com: ashritha.budharaju@deque.com Can you please check this comment?
,ksimonso@craftonhills.edu: Isn't this considered a data table? The title and email are headers for the associated information. Or is it not considered such because it only lists one individual rather than multiple?
shipra.pandey@deque.com
,ashritha.budharaju@deque.com: shipra.pandey@deque.com - Here is our response

The current implementation accurately communicates the content's structure without misleading the user. Although the table is primarily used for layout, it does not create any semantic confusion or accessibility barriers. So we can ignore this issue.

ksimonso@craftonhills.edu: But they're not clickable. So they can't be considered navigation. shipra.pandey@deque.com ,ashritha.budharaju@deque.com: shipra.pandey@deque.com - Here is our response for this.

Although these elements are non-interactive, their visual presentation and arrow indicators effectively communicate the within the path. Unlike standard navigation, which typically presents a set of related elements, breadcrumb navigation provides a specific parent-to-child path. Wrapping this area in a navigation region with an aria-label="Breadcrumb" programmatically conveys this unique structural purpose to assistive technologies.,shipra.pandey@deque.com: ashritha.budharaju@deque.com Need your help regarding the comment

ashritha.budharaju@deque.com: shipra.pandey@deque.com - This is our response on this

Yes in this new updated page "https://www.craftonhills.edu/faculty-and-staff/student-injury-form-1.php", when the calendar opens on focus, when the user uses the arrow keys, the focus is placed inside it and elements in calendar are operable with keyboard. So this issue of 2.1.1 keyboard operability for the calendar is solved.

But just to let know there are still few issues in the calendar which are yet to be fixed. Like the color contrast issue for the previous and next arrow icons but these fall under different success criteria.,shipra.pandey@deque.com: ashritha.budharaju@deque.com Need your help regarding the comment,ksimonso@craftonhills.edu: I've created a new page with the new form builder our CMS is trying to force us into. Could you take a look and see if it eliminates some of the accessibility issues? https://www.craftonhills.edu/faculty-and-staff/student-injury-form-1.php shipra.pandey@deque.com aparna.kotha@deque.com: Validation round: 1
